

USB devices deliver high speed data transfer with secure portability for all types of data, whether its music in MP3 format, video or general data files. As people become increasingly digitally based, there is less need for printing out information, making USB flash drives a growing product and one that is inherently more environmentally friendly.

Natural USB, Wood and Bamboo

Natural USB Flash Drives

(All models are available in Wood and Bamboo)

- Bamboo is one of the world's fastest growing plants on the planet
- There are over 1200 species
- They can regenerate faster than wood and is typically harvested within 6 to 12 months
- The growth period of bamboo is short - it will become mature in three years
- Bamboo does not require replanting when harvested
- It has a mature root system that sends up roots for decades so forests are not harmed
- Bamboo can be reused, decomposed, yet it will not generate harmful materials.
- With a positive impact on our environment Bamboo truly is one of the world's renewable sources.
- Bamboo also helps reduce carbon dioxide gases and mitigates water pollution due to its high nitrogen consumption
