

USB Memory Sticks deliver high speed data transfer with secure portability for all types of data from music in MP3 format to video or general data files. As people become increasingly digitally based, there is less need for printing out information making USB flash drives a growing product and one that is inherently more environmentally friendly.

---

# USB Printing

---

Brand USBs with your company logo or other text such as website address. Print options include:

- **Screen printing** - A Pantone only process resulting in high quality print up to 4 colours.
- **Laser engraving** – Ideally on metalised products, the surface is etched using laser mark technology.
- **Pad printing** – A Pantone process, suited where the surface is not flat and screen printing is not possible.
- **Personalised Print** - On certain USBs we also offer personalised printing, so that each USB would have the recipients name on.

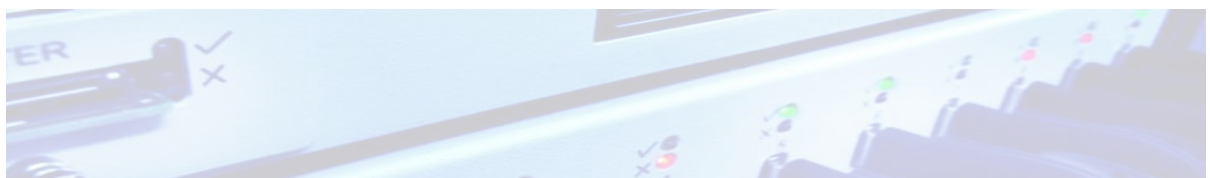

# Data Loading Service

---

We can pre-load data-files, from simple information files through to complex flash presentations. If you need assistance in any aspect of content creation or have any technical questions we have a team of in-house multi-media developers.

- **Auto run** - This feature allows a file or program to start automatically (Windows XP, Vista only) once the USB is inserted into the drive. This process works by effectively fooling the USB flash drive into thinking it is a CD-Rom as well as a USB flash memory device. This requires programming of the controller and cannot be removed by the user.
- **Auto-Play** - Windows XP and Vista has built in functionality so that when the USB flash drive is plugged in, it can be set up to look for the relevant program to run a file. This technology provides the option to have a menu item e.g. (Open this file – with an icon.) This always gives the user the choice whether to run the content each time.
- **Content protection** - We are able to protect data on the memory sticks by using a partition and preventing deletion and addition of files to the segment with clients content.
